Education

Boston University

Boston, MA

B.S. in Computer Science, Minor in Business Administration

Expected May 2027

- Relevant Coursework: Distributed Systems, Programming Languages & Compilers, Agentic AI, Database Systems, Full-Stack Software Engineering, Algorithms, Data Structures
- Study Abroad: Boston University London, Spring 2026

Experience

Product Manager Intern

Boston, MA

Red Hat, AI Business Unit

May 2026-August 2026

- Owned product expansion of Red Hat's Model-as-a-Service (MaaS) inference platform beyond OpenShift to vanilla Kubernetes, unblocking multi-cloud AI deployment for enterprise customers.
- Scoped and shipped Red Hat MaaS on AKS Tech Preview in RHOAI 3.5.
- Replaced OpenShift dependencies to run MaaS on any Kubernetes: Helm charts for install, Red Hat Connectivity Link (Kuardrant) for gateway, and an external OIDC provider for auth.
- Took a proof of concept to delivery across 5 engineering teams, scoping and assigning work and authoring Jiras while surfacing and clearing blockers to make the release deadline.
- Authored a published technical deep-dive article and a customer-facing demo.

Software Engineer Intern

London, UK

Synkka AI, supply chain startup

February 2026-April 2026

- Built an in-house role-based access control (RBAC) system to replace a third-party permissions layer, letting customers define custom roles across 13+ production organizations.
- Shipped a self-service invite and registration feature, replacing manual user onboarding.
- Modeled company growth data in Grafana dashboards to support scaling decisions.

Software Engineer Intern

Framingham, MA

Staples, Payments

June 2025-August 2025

- Built automated API tests integrated into CI/CD, cutting ~3 story points of QA effort per sprint.
- Eliminated 50+ security vulnerabilities and ensured payment security compliance (PCI DSS).
- Worked with product and QA to prioritize bugs and features on Java Spring Boot microservices.

Software Engineer Intern

Rochester, NY

GIDR.ai, AI startup

June 2024-August 2024

- Designed four self-correcting LLM evaluators measuring accuracy, groundedness, and latency.

Projects

HackHarvard (Hackathon)

Cambridge, MA

- End-to-end physical therapy web application with front end, authentication, and backend API
- Live pose estimation, real time accuracy scores for prescribed exercises in real time.

Skills, Interests, etc

Languages: Python, Java, Go, C, Assembly, JavaScript, HTML/CSS, SQL, NoSQL

AI: Agentic SDLC, MCP, RAG, MaaS, on-prem model serving, rate limiting, AI-assisted development

Infrastructure: Kubernetes, Docker, Linux, Git, CI/CD, cloud computing, AWS/Azure

Product: Roadmapping, customer demos, customer feedback, cross-functional delivery, Agile, Jira

Interests: Open source, cryptography, US history, philosophy, weightlifting, Pool/billiards, writing
